

SHIBIN XIE

10:04:18 Is there a documentation for app layout?

10:04:29 Great. thanks

JAIME MAIHUIRE

10:15:27 Shared with you a tutorial "Content"-->"Charts"--> Section 1.5

10:16:49 FigureWidget(). The logic is straightforward, HBox or VBox only accepts as children widgets but a figure from plotly is not a widget to FigureWidget allows you to transform from fig object to widget

SHIBIN XIE

10:17:32 Got it. Make sense. Thanks, Jaime. You are a great help

JAIME MAIHUIRE

10:17:48 Let me know if you need more tips

SHIBIN XIE

12:34:23 Hi, Jaime, if I have multiple charts. Should I put all charts into the chart\_box like this: chart\_box.children = [chart1, chart2]

12:34:57 How to arrange charts vertically or horizontally?

12:45:43 Ok. I got it. thanks

12:48:22 Just curious for a couple of issues: 1) ticker input: when I input tickers, the cursor sometimes jump to the end, as a result, the ticker is incorrect. 2)The app freeze, and I cannot input ticker anymore. Not sure why

JAIME MAIHUIRE

13:33:04 Regarding 1) there is a small lag for the autocompletion feature. So you have to wait until it provide some options. Then just select it. 2) If the app is not running you should take a look at log

13:33:05 shared  [Show Image](#)

13:33:40 Let me know if that helps

SHIBIN XIE

13:39:09 How do I access the log?

13:40:08 Also, I wrote the app, here is the link: BQNT /REFID:eda0205bac7f4fc9ab7dc316fefad09c

13:40:39 How do ppl access it? Just copy and paste the link into their BBG window to launch?

13:41:01 The app is a bit slow to execute 😊

JAIME MAIHUIRE

14:06:05 To my knowledge 1) shared project 2) then the receiver has to do it "push it in the launchpad"

14:06:29 But let me ask if there is a more straight forward way

SHIBIN XIE

14:07:19 I sent the link to my colleagues. Not sure how they can launch it

JAIME MAIHUIRE

14:08:14 Confirmed, the person that would like to use the app has to have 1) bqnt 2) have the notebook (application) 3) publish to the launchpad

👉 14:07:19 SHIBIN XIE: I sent the link to my colleagues. Not sure how they can launch it

14:08:28 Same way you did

SHIBIN XIE

14:09:17 I went to the CMTY and click the app. Can they just copy and paste the link into BBG window, then "Enter"

JAIME MAIHUIRE

14:11:41 To share the application with your colleagues 1) share your project 2) the receiver has to publish the app to its launchpad
